Clinical Rotation Report Template – BMLS Students

Student Name: _____
Reg. No: _____

School: _____
Department: _____
Rotation Period: _____

1. Introduction

- Briefly describe the purpose of the rotation.
- Outline the departments/units you were attached to.
- State the objectives of your clinical attachment.

Example:

"The purpose of this rotation was to gain practical experience in routine diagnostic laboratory procedures, quality assurance, and patient sample handling across various hospital laboratory units."

2. Objectives of the Rotation

- List 3–5 learning objectives you aimed to achieve.
  Example:

1. To gain hands-on experience in hematology, clinical chemistry, microbiology, and immunology.
2. To understand laboratory workflow and sample management.
3. To learn quality control procedures and documentation.
4. To observe interaction between laboratory staff and clinical teams.

3. Description of Departments/Units

For each laboratory section you rotated through:

Section Name (e.g., Hematology)

- Main activities observed/performed
- Key instruments/equipment used
- Common tests conducted

- Learning outcomes

Repeat for:

- Clinical Chemistry
- Microbiology
- Blood Transfusion/Immunology
- Histopathology/Cytology (if applicable)
- Any other specialty units

4. Practical Skills Learned

- List the **procedures you performed**
- Include **techniques, sample handling, and interpretation**
- Mention **supervision level** (observed, assisted, performed under supervision)

Example:

- Prepared and stained peripheral blood films
- Conducted antibody screening and titration tests
- Performed urinalysis using dipstick and microscopy

5. Challenges Encountered

- Technical challenges (e.g., equipment malfunction)
- Time management issues
- Difficulties in patient/sample handling
- How you overcame them

6. Application of Knowledge

- Link rotation experience to your theoretical knowledge.
- Highlight how practical exposure reinforced or clarified your understanding.

7. Quality Assurance & Safety

- Describe **quality control measures observed**
- Safety protocols followed
- Infection prevention practices

8. Reflection

- What did you learn about laboratory operations?
- Which skills improved the most?

- How did the experience influence your career perspective?

9. Conclusion

- Summarize your overall experience and achievements.
- Highlight key lessons from the rotation.

10. Acknowledgements

- Supervisors, laboratory staff, and anyone who guided your rotation.

📝 Tips for Students

1. Write **in the first person** (I observed, I performed…).
2. Be **specific and concise** – don't just say "I learned lab skills."
3. Include **tables for tests performed or procedures** if helpful.
4. Proofread for **clarity and grammar**.
